

ProjectOne - 03 Target Audience (Draft v0.1)

Purpose

Define exactly who ProjectOne is built for and who it is not built for.

Primary Audience

Independent content creators who publish consistently and want to automate repetitive work while maintaining creative control.

Secondary Audience

Small creator teams, agencies, entrepreneurs, educators and businesses that produce content regularly.

Ideal Customer

A creator who treats content as a business, values efficiency, is willing to invest in tools that save time, and wants one platform instead of many disconnected applications.

Customer Goals

Produce more content, improve quality, save time, increase consistency, grow audience and revenue, and simplify daily workflows.

Pain Points

Too many tools, repetitive manual work, context switching, inconsistent workflows, slow production, complex AI ecosystems and fragmented data.

Who ProjectOne Is NOT For

Casual users who rarely create content, users looking only for a free AI chatbot, people unwilling to learn a professional workflow, or users expecting AI to replace all creative decisions.

Target Outcome

Enable creators to spend less time managing tools and more time building valuable content businesses.
