

ProjectOne - 14 Video Generation (Draft v0.1)

Purpose

The Video Generation module transforms an idea into a complete, publish-ready video using coordinated AI workflows.

Objectives

Reduce manual production time while maintaining quality, consistency and user control throughout the generation process.

Inputs

Topic, prompt, uploaded files, target platform, preferred duration, voice, language, style and optional user assets.

Generated Outputs

Script, voice-over, visuals, video composition, subtitles, title, description, hashtags and thumbnail.

Workflow

Input → Planning → AI Generation → Quality Checks → User Review → Regeneration (if required) → Final Export.

User Control

Users can preview, edit, regenerate individual components, change providers and approve the final result before publishing.

Success Criteria

A complete first version of a high-quality video can be generated in minutes with minimal manual effort.
