

ProjectOne - 41 Release Strategy (Draft v0.1)

Purpose

Define how ProjectOne evolves through predictable, stable and high-quality software releases.

Release Model

Development progresses through internal milestones, alpha, beta and stable releases with clear entry and exit criteria.

Versioning

Use semantic versioning to communicate breaking changes, new functionality and bug fixes in a consistent way.

Quality Gates

Every release must pass automated testing, manual validation, security review and performance verification before deployment.

Deployment Strategy

Use staged deployments with rollback capability, monitoring and post-release validation to minimize production risk.

Success Criteria

Users receive reliable updates with minimal disruption while the platform continuously improves.
