

ProjectOne - Security Architecture (Draft v0.1)

Purpose

Define the security model protecting ProjectOne, its users and all platform resources.

Security Principles

Zero Trust, least privilege, defense in depth, secure by default and continuous monitoring.

Core Controls

Encryption, authentication, authorization, audit logs, rate limiting, secrets management and network protection.

Incident Response

Define detection, containment, recovery and post-incident review procedures.

Success Criteria

The platform remains resilient against common threats while protecting user data.
