

ProjectOne - 10 Product Bible (Draft v0.1)

Purpose

This document defines the complete product at a high level and serves as the primary reference for every functional document that follows.

Product Overview

ProjectOne is an AI Operating System that unifies planning, creation, generation, editing, publishing, analytics and automation into one platform.

Primary Objectives

Save creators time, simplify workflows, automate repetitive work and help users build sustainable content businesses.

Core Product Pillars

AI Generation, AI Agents, Automation, Analytics, Memory, Multi-Platform Publishing, Collaboration, and Continuous Optimization.

Feature Standards

Every feature must solve a real problem or save measurable time while remaining simple, transparent and aligned with the product philosophy.

Scope

The Product Bible acts as the parent specification. Individual documents such as Dashboard, Projects, AI Chat, Video Generation, Analytics, Billing and Settings define each area in detail.

Single Source of Truth

All future functional specifications, technical documentation and implementation tasks must remain consistent with this Product Bible.
