

ProjectOne - 13 AI Chat (Draft v0.1)

Purpose

The AI Chat is the primary conversational interface between the user and ProjectOne. It provides guidance, executes actions and manages workflows across the entire platform.

Objectives

Allow users to interact with ProjectOne using natural language instead of navigating complex interfaces.

Core Capabilities

Answer questions, create and manage projects, trigger AI workflows, access project memory, analyze performance, generate content, explain errors and execute approved actions.

Context Awareness

The AI understands the user's workspace, connected channels, active projects, previous conversations and long-term preferences while respecting privacy and permissions.

Design Principles

Fast, reliable, transparent, context-aware, action-oriented and always under user control.

Success Criteria

Users can complete the majority of daily tasks through conversation while maintaining full visibility and approval over important actions.
