

ProjectOne - 15 Analytics (Draft v0.1)

Purpose

The Analytics module transforms raw performance data into actionable insights that help creators improve content quality, consistency and business growth.

Objectives

Provide clear metrics, identify trends, measure AI performance, estimate ROI and recommend improvements based on historical data.

Core Metrics

Views, watch time, engagement, subscribers, publishing consistency, AI generation costs, estimated revenue, profit estimation, workflow duration and content performance.

AI Insights

Identify successful patterns, detect weak-performing content, recommend optimizations, compare strategies and learn from previous results.

Design Principles

Actionable over decorative, simple over complex, explain every recommendation, and prioritize business impact.

Success Criteria

Users understand what is working, what is not, and what they should do next without manually analyzing large amounts of data.
