

ProjectOne - 33 Frontend Architecture (Draft v0.1)

Purpose

The Frontend Architecture defines how users interact with ProjectOne through a fast, consistent and scalable interface.

Objectives

Deliver an intuitive user experience that supports complex workflows while keeping the interface simple, responsive and accessible.

Core Components

Design System, Layouts, Navigation, Pages, UI Components, State Management, Forms, Notifications and Real-Time Updates.

Architecture Principles

Component-driven development, reusable UI, responsive design, accessibility, predictable state management and clear separation of concerns.

User Experience

Every interaction should minimize friction, reduce cognitive load, provide immediate feedback and maintain consistency across the platform.

Success Criteria

The frontend remains easy to extend, visually consistent and capable of supporting future features without major redesign.
