

ProjectOne - 34 Infrastructure (Draft v0.1)

Purpose

The Infrastructure defines the cloud foundation that hosts, secures, deploys and operates every ProjectOne service.

Objectives

Provide a reliable, scalable and secure environment capable of supporting continuous delivery and future growth.

Core Components

Frontend Hosting, Backend Services, Database, Object Storage, CDN, Background Workers, Monitoring, Logging, Secrets Management and CI/CD.

Infrastructure Principles

Cloud-first, infrastructure as code, high availability, automated deployments, observability, disaster recovery and cost awareness.

Operational Requirements

Automated backups, health monitoring, alerting, rollback capability, environment isolation and secure secret management.

Success Criteria

ProjectOne infrastructure remains secure, resilient and scalable while allowing rapid iteration with minimal operational overhead.
