

ProjectOne - 42 Testing Strategy (Draft v0.1)

Purpose

Define the testing approach that ensures ProjectOne remains reliable, secure and maintainable throughout its lifecycle.

Testing Levels

Testing includes unit, integration, end-to-end, performance, security and user acceptance testing.

Automation

Automated test suites run during continuous integration to detect regressions before deployment.

Quality Standards

Critical user flows, API endpoints and AI workflows must be validated before every release.

Defect Management

Bugs are prioritized by severity, tracked centrally and verified before being marked as resolved.

Success Criteria

Every release meets predefined quality standards while minimizing production defects and regressions.
