

ProjectOne Technical Documentation (Master v0.1)

This document defines the engineering standards, implementation philosophy and technical conventions used to build ProjectOne. Unlike the Project Bible, which describes what the product is, this document defines how the product must be designed, developed, tested, deployed and maintained.

100–109 Development Standards

- 100 Development Philosophy
- 101 Coding Standards (Clean Code, SOLID, DRY, KISS, YAGNI)
- 102 Naming Conventions
- 103 Folder Structure
- 104 Git Workflow
- 105 Commit Convention

110–119 Frontend Standards

- 110 Next.js Architecture
- 111 React Best Practices
- 112 State Management
- 113 Tailwind Standards
- 114 UI Components
- 115 Forms
- 116 Validation
- 117 Error Handling
- 118 Routing

120–129 Backend Standards

- 120 FastAPI Architecture
- 121 API Design
- 122 Business Logic
- 123 Service Layer
- 124 Repository Pattern
- 125 Dependency Injection
- 126 Background Jobs
- 127 Logging Standards

130–139 Database Standards

- 130 Supabase Standards
- 131 PostgreSQL Guidelines
- 132 Migration Strategy
- 133 Indexing Strategy

- 134 Row Level Security Policies
- 135 Backup Policy

140–149 AI Standards

- 140 Prompt Engineering
- 141 System Prompts
- 142 Memory Standards
- 143 Agent Communication
- 144 Context Management
- 145 Model Selection
- 146 Fallback Strategy
- 147 Cost Optimization

150–159 API Standards

- REST Principles
- Authentication
- Versioning
- Pagination
- Filtering
- Sorting
- Rate Limiting
- Error Responses

160–169 Security Standards

- Secrets Management
- JWT
- OAuth
- Permissions
- Encryption
- Audit Logs
- OWASP Best Practices

170–179 DevOps Standards

- CI/CD
- Docker
- Deployments
- Monitoring
- Health Checks
- Scaling
- Logging

180–189 Testing Standards

- Unit Testing
- Integration Testing
- End-to-End Testing
- AI Testing
- Performance Testing
- Regression Testing

190–199 Code Review Standards

- Architecture Review
- Security Review
- Performance Review
- Naming Consistency
- Testing Verification
- Documentation Requirements

Conclusion

This master document serves as the foundation for all future engineering decisions within ProjectOne. Each numbered topic may later evolve into its own dedicated technical document as the platform grows. The objective is to maintain consistency, scalability, maintainability and high engineering quality across the entire codebase.
