

ProjectOne Design Backlog & UI Vision v1.0

Purpose

This document defines the long-term UI vision for ProjectOne. It is intentionally separate from the engineering roadmap. It must never introduce new architecture, database changes or backend behavior. Its only responsibility is visual quality and user experience.

Design Philosophy

ProjectOne should feel like a premium AI operating system rather than a generic admin panel. The design language should emphasize clarity, typography, spacing, subtle animations and information hierarchy. Inspirations include Linear, Vercel, Stripe, Raycast, Cursor and Apple professional applications.

Foundation Rule

Finish Foundation (STEP-26) first. During Foundation, collect design ideas only. After Foundation, execute one dedicated UI Polish sprint that upgrades every screen consistently.

Dashboard Vision

- AI Provider Status Bar
- Large KPI cards
- AI Spend Overview
- AI Activity Timeline
- Active Queue
- System Health
- Recent Projects
- Usage by Model
- Floating Command Palette (Ctrl+K)

Visual Rules

Dark interface, rounded corners (12-16px), restrained color palette, premium typography, consistent spacing, subtle blur, micro-animations (150-200ms), polished empty/loading states, high-quality charts and tables.

Implementation Policy

Only presentation may change. Business logic, APIs, authentication, AI routing, database schema, billing and architecture must remain untouched. This document is a design backlog, not a roadmap step.
